WEATHER

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA

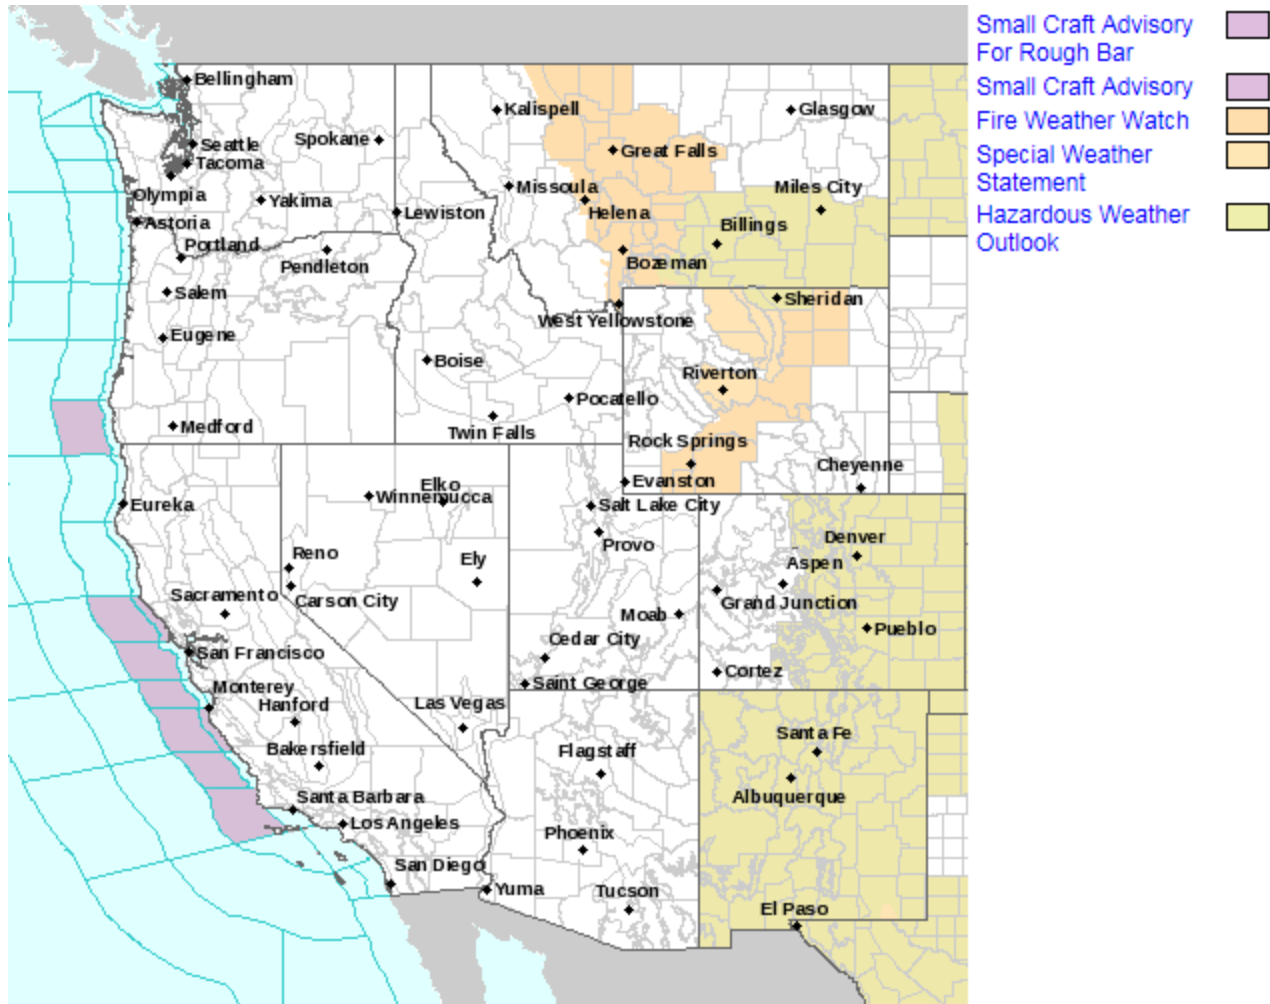

A broad low pressure trough off shore sunk further south overnight and pulled high pressure back to the west over California. This will keep things dry and warmer again today and Friday for a return to above seasonable temperatures for most areas. The warmest inland valleys will be in the mid-90s for the next two days. Over the weekend and early next week, the trough will gradually move eastward and weaken. There will be a chance of rain over the very far northwest corner of Northern California on Tuesday. Although relative humidity may come up somewhat in most areas, conditions appear likely to remain dry. Temperatures will be near to a bit below seasonable as the trough regains a foothold over the Northern Operational area early next week, with the warmest inland areas dipping into the lower and mid-80s. The trough will linger through next Wednesday, followed by high pressure with warming possibly returning by the end of next week. The marine layer ought to remain well mixed through the seven day period with little in the way of coastal low clouds and fog. Higher relative humidity will eventually make a showing early next week, but a dramatic increase seems unlikely, except in the far northwest if rain occurs. Overnight thermal belt conditions can be expected to continue developing for some areas into the weekend at least, with some rather poor to moderate relative humidity recovery for the mid and upper slopes. Gusty south to southwest winds of 22-28 mph are expected to develop Friday in areas near and east of the Cascade/Sierra crest, otherwise winds will be seasonably relatively light.

SOUTHERN CALIFORNIA

High pressure over the Southwest will produce sunny, warm and dry weather the next few days. Expect high temperatures to climb three to five degrees both today and Friday over most locations. High temperatures by Friday will be in the upper-80s along the coast and in the mountains over 5,000 feet, 100-103 in the valleys and lower foothills of Southern California and close to 110 in the low desert. Minimum relative humidity will be in the 10-15% range with the lowest readings over Central California. Winds will be very light during the next two days, except for the Central Coast which will see winds of 10-20 mph again this afternoon. This weekend into early next week, a trough will slowly move into Northern California, causing onshore flow to develop Sunday which will increase Monday and Tuesday. Expect a slow cooling trend early next week and by Tuesday, high temperatures will be close to seasonal averages. Some marine layer coverage will likely develop along the coast, but expect very low relative humidity inland and above the marine layer early next week. It will also turn breezy in and near the deserts during the afternoon hours. Next Friday and into the weekend, cold air moving into Great Basin may produce light offshore flow, very warm temperatures and low relative humidity.
